2nd and 3rd ports of entry for cruise arrivals are only to be used if an analysis is being done by individual island and you do not want the count for the Bahamas as a whole. If you want a count for the Bahamas as a whole you must look at 1st port of entry only to avoid double counting.

Technically you cannot calculate a % increase from zero, but 100% was inserted manually in the above tables in some instances and used as placeholders to show that there were significant increases between 2021 and 2022 in the period.

The figures are preliminary and subject to revision.
